

CARPENTER ANT TREATMENT CLIENT PREPARATION FORM

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

HOW TO PREPARE FOR THE SERVICE - KITCHEN (if this is the area of activity)

- In areas where carpenter ants are seen and in particular the kitchen, empty bottom cupboards and bottom of closets.

LIVING ROOM, BEDROOMS, GARAGE, ETC (if this is the area of activity)

- Move all furniture 12" (30 cm) away from the walls (Please be sure to exercise safety first and do not attempt to move very large furniture)
- Clear all closet floors and shelves of shoes and other items. Clothing on hangers may be left in place.

EXTERIOR OF THE HOME (if this is the area of activity)

- Move BBQ, patio furniture, etc 12" (30 cm) away from the outside walls (Please be sure to exercise safety first and do not attempt to move very large furniture).

HOW TO HELP US FURTHER

- Try to keep a LIVE sample of the pest in a sealed zip-lock bag or container for the technician to indentify.
- Tell us of any locations in your home that have experienced water leaks or water damage, or possible rotting wood.

WHAT YOU CAN EXPECT FROM THE TREATMENT

A complete interior and exterior inspection will take place in an effort to to locate any nests. Your Technician will use a variety of methods to control the carpenter ants depending on each unique situation. Sometimes it is necessary for the technician to drill small pilot holes into walls to access a carpenter ant nest. Liquid sprays, dust and/or bait stations may be used. Bait stations should never be moved or tampered with. You will be contacted for your next scheduled inspection and treatment. All treatments will be made with your safety in mind to ensure your health.

AFTER THE TREATMENT

The bait and spray treatment will remain effective only if the following steps are taken after your home is serviced:

- DO NOT use other pest control chemicals (powders or sprays) or cleaning products anywhere near bait placements or spray treatments, as this will decrease effectiveness.
- Remove all competing food sources (this means keeping all foods in tightly sealed containers, cleaning up spills as they occur, removing trash on a regular basis, etc.

REMINDER

It is necessary for you and your pets to leave your home for 4 hours once the treatment begins.

Fish aquariums maybe left onsite, however they should be covered and air filters must be disconnected. Persons with underlying health conditions should consult their family physician where they have concerns regarding re-entry time. Upon re-entry, please open windows for 20 min to properly ventilate the treated rooms.

Your Technician...

- Provincially Licensed
- Receives on-going training in their branches and at Abell University online
- Audited regularly by the industry's most recognized Quality Assurance Team
- Fully Insured
- Follows Quality Pro standards
